

The telecor™ Crisis Notification System

for Educational and Campus Environments

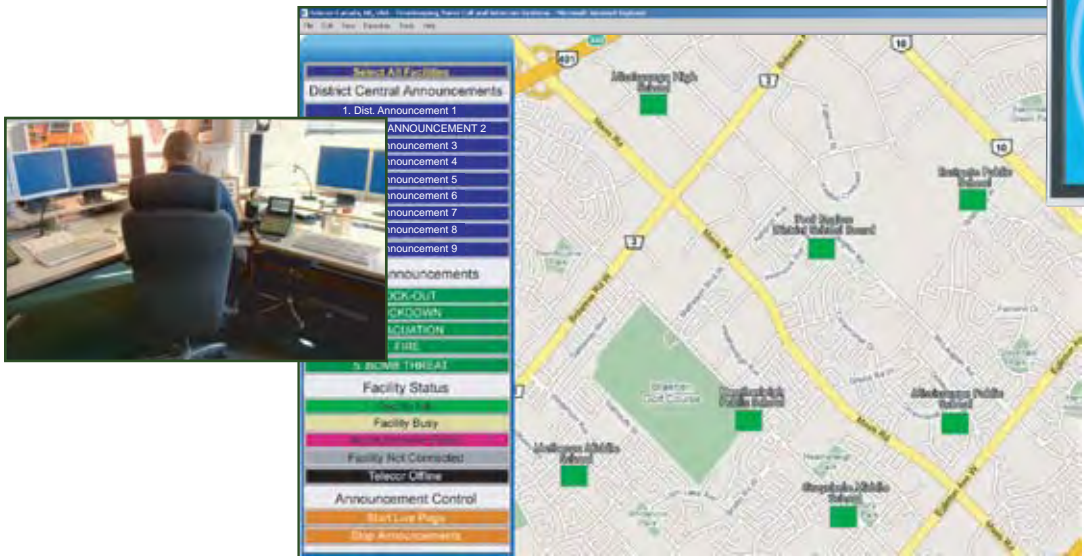

In Any Crisis, Your **Most Valuable Resource** Is Communications

for district-wide notification

Intuitive Emergency Response So

The Telecor Crisis Notification System (CNS) is a flexible and comprehensive communications platform that provides a means for broadcasting announcements to students, faculty, staff, and visitors. CNS can alert everyone to an emergency that is imminent or in progress, and instruct them on how to respond.

Local Notification Capabilities

Pre-recorded or live voice emergency announcements can be initiated or broadcast at the local level from a PC within the school by an authorized staff member. A graphical representation of the floor plan helps to quickly select and broadcast the appropriate announcement. Once an emergency announcement is triggered, a message is automatically transmitted to the school at the district office or command center.

At the District Office

The Telecor Crisis Notification System is flexible enough to fit the individual needs of each school district or campus, and has the capacity for district-wide administration. The CNS utilizes IP Network Protocol to broadcast all messages through the school's LAN/WAN. Messages can be pre-recorded to provide a planned response to a specific situation, or they can be broadcast live to address unique or changing situations. The CNS also has the ability to broadcast to one, several, or all facilities at any time.

The Graphical User Interface runs on Windows® and can be customized for your district. A geographical representation indicating the location of each facility can be displayed using an uploaded background map of the area.

Network connections and the status of each school's P.A. system are fully monitored. The CNS constantly probes each location of its status to ensure that all selected schools have received the notification. Status indicators for each school will display any communication failures.

Solutions

Utilize your Existing PA System

The Telecor CNS can be integrated into your existing installation. The system utilizes IP Network technology to broadcast all messages through the school's existing public address system, adding new levels of capabilities to your legacy system, and preserving your investment.

Anywhere, Anytime, in Real Time

The integration with wireless technology is proven to increase the speed of all actions in response to an emergency. CNS will send immediate messages to a wide array of wireless devices including PDAs, pagers, and mobile phones. In

addition, email notification as well as pop-up notification alerts on office PCs relay information to all appropriate personnel. Visual messages can also be broadcast to electronic message displays located in schools or campus buildings area wide.
