

## Portfolio of Solutions

**Access (246-35-1 & 246-35-2):** GE Security's integrated security management and access control systems provide software and hardware to manage access control, photo ID credentialing, alarm monitoring and video surveillance. This includes: Card Readers and Keypads; Control Panels; Integrated Security Software; Proximity and Smart Card Credentials; System Support Services; and Visitor Management Systems.

**Fire & Life Safety (246-25):** GE Security's fire systems are uniquely designed to provide life safety solutions that protect and preserve people, products and places. Some of our Fire & Life Safety products & solutions includes: Carbon Monoxide Detection; Central Station Technologies; Emergency Notification & lighting; Fire Alarm Systems; Fire Alarm Panels; Intelligent Smoke Detection.

**Government & Military (Various SIN's):** Whether you're with a federal, state or local government agency, GE offers innovative technologies to help make your world safer. GE can integrate the latest advancements with your existing equipment and IT systems so you can increase security at embassies, borders, military installations, water treatment plants and other critical public infrastructure. Plus these integrated systems capture valuable data you can use to improve procedures, investigate events and prevent others from happening at all.

**Integrated Security Management (Various SIN's):** Control intrusion, access, video and communications with one of GE's integrated systems. Simplify security management with products like Alliance or the robust Facility Commander to connect all your security devices and functions. Work on-site or remotely depending on your needs.

**Intrusion & Property Protection (246-40):** GE Security's intrusion alarm systems and detectors protect people and property from loss. Some of the Intrusion products and solutions offered by GE Security includes: Central Station Software and Web-Based Portal; detection Devices; Intermodal Freight Container Security Tracking; Mobile Resource Management System/GPS Technology; Security Alarm Systems.

**Key & Lock Management (246-36)** GE's key and lock management systems manage and monitor egress and control access for a wide variety of applications that includes: Automotive; Fleet; Industrial; Real Estate; Retail/Hardware.

**Sound & Communications (246-20-4):** GE Security's advanced communication systems offer flexible and simple solutions for education and healthcare applications. This includes: Commercial Sound Products; Institutional Intercom and Paging Systems; Timekeeping and Scheduling Solutions; VoIP Patient/Staff Communication Systems.

**Systems Connectivity (Various SIN's):** GE designs and manufactures an extensive line of advanced fiber-optic transmission systems for telecommunications, broadcast and professional video, security, industrial control, and transportation that are sold worldwide. Fiber-optic transmission gives you higher performance, more capability and fewer hassles than copper, making it the smartest way to connect your security systems.

**Video Surveillance (246-42-1):** GE's global video surveillance solutions provide a one-stop shop to help monitor suspicious activity, manage safety, protect and preserve property and provide records for review. This includes: Conventional and Network Cameras; Digital and Hybrid Recorders; IP-Based Networking and Transmission devices; Mobile and Intelligent Video; Monitors and Accessories
