

# GE Telergy PC Console

To meet the increasing demands of patient and management, it's critical that your nurse call communication system is flexible and can be configured to meet the specific needs of the nursing units. Access to patient care data from a single workstation enables caregivers to provide the type of response that patients expect. This may include patient names, caregiver assignments, attending physician, and even recent patient call history.

GE Telergy™ PC Console displays information from the Telergy database on a properly configured PC workstation in a convenient, easy-access format. ListView presents data in a list; MapView presents information on a floorplan. Each user can format screens to their personal preferences so the most critical data is shown.

The following data points are available with PC Console in either ListView or MapView:

- Patient Call Information
- Staff Location
- Patient Notes
- Reminders & Reminder Reasons
- Patient Room Call History
- Wireless Device Assignments
- Patient ADT Demographics
- Messaging History
- Staff Assignments
- Patient Census (Room List)

## Key Features and Benefits

- **Enhanced data view.** When the Staff Console isn't enough, PC Console presents additional information to assist caregivers with the information required to deliver appropriate care.
- **Simple user interface.** Streamlined navigation via touch screen option or mouse, PC Console – ListView offers multiple customized views that present the desired data in the most convenient format, making training easier.
- **At-a-glance simplicity.** With PC Console – MapView, information is displayed in a way that enhances visibility and comprehension. Colored rooms and icons, text boxes with critical information, and hover capability make the user interface easier to learn and use effectively.
- **Shared workstation.** PC Console offers enhanced information display without the need for a dedicated PC. Any properly configured workstation at the nurse station or surrounding work areas will support PC Console.

# Information the Way You Want It

## More Details

PC Console is designed to provide you with additional information to appropriately manage the call process. At key locations, information is desired beyond what the Staff Console displays. PC Console may be added virtually anywhere, but it makes the most practical sense to have it installed near Staff Consoles in high volume areas.

## Customizable

PC Console screens may be customized to the user's preferences so the most needed information is displayed clearly and conveniently.

## Flexible

PC Console ListView and MapView display the same information but in different formats. This flexibility allows staff members to select the view that works best for their particular application. It is easy to toggle between the two views in the event that both are required at certain locations.
