facilities

EST3  
control platform

## Powerful systems flexible enough to handle facilities of any size

GE Security control panels have both the power and the capacity to handle any sized healthcare facility, from the smallest retirement home, to the largest medical center.

The incomparable **EST3** control platform combines support for intelligent Signature Series detection with an unstoppable multi-priority peer-to-peer token ring network, and a full eight channels of multiplexed digital audio. Meanwhile, Synergy enabled EST3 pulls double-duty as a cost-effective integrated system that combines fire alarm with security and access control. In fact, it is the world's only fully-listed platform that can offer this level of control over your facility.

For smaller facilities, the **QuickStart** family of control panels offers intelligent detection, conventional detection, or a combination of both. Ideal for retrofits, QuickStart is a low-cost solution loaded with high-end features.

FireWorks  
graphical interface

## Comprehensive control and monitoring leaves nothing to chance

**FireWorks** delivers a highly effective, yet surprisingly simple means of monitoring and control for your facility by organizing all the necessary system information into context-sensitive event-driven screen quadrants that graphically display your facility down to the detail of a single room. Your personnel will never find themselves abandoned by technology just when it's needed most because each quadrant keeps pace with your operator by constantly presenting updated content relevant to the selected event.

When used to blend multiple functions into a single point of monitoring and control, the true power of FireWorks becomes apparent. Without leaving their workstation your personnel can concurrently monitor the status of smoke, heat, and motion detectors, and enable or disable security partitions instantly from the safety of a single workstation.

Every caregiver's first responsibility is to the safety and security of the lives with which they are entrusted. With powerful features and valuable options geared expressly for the healthcare industry, GE Security's fire, security, and access control systems ensure that your responsibilities are met, and your patients and staff are as safe and secure as they can be. Find out how you can make us part of your life saving team. Contact us today.

Audio Source Unit

## Eight channel audio prevents unwanted broadcasts from reaching patient areas

**GE Security's unique eight channel audio** delivers the power of emergency voice communication to any healthcare setting. Fully programmable to provide automatic evacuation messages only to the areas of your building where they're needed, this system offers plenty of opportunity to get the message out to personnel – without broadcasting unnecessary evacuation messages to patient areas. Our exclusive multiplexed audio also means that response personnel can easily communicate with each other, while powerful digital audio signals, tuned specifically to the human voice, make instructions clear and highly intelligible. Because it uses digital technology, EST3 audio is carried over a single pair of twisted wires. This eliminates the need for costly shielded cabling, and makes GE, not only the best choice for emergency communications, but also the most cost-effective one.

Signature Series intelligent detectors

## Unparalleled reliability for new installations, unequaled economy for retrofits

**Signature Series** detectors and modules provide the reliability modern healthcare settings demand. The world's most sophisticated fire detection solution, Signature Series is rich with performance benefits and cost-saving features.

The secret behind the success of Signature Series is that these detectors don't simply react to conditions – they interpret information from several sources. This means that a single multisensor detector can distinguish between a harmless puff of dust and a wisp of smoke; between the hot, humid conditions of a laundry room, and a serious life safety condition in a patient ward.

What's more, Signature Series' reporting functions are so reliable that sensitivity testing of individual detectors is not required, and its communications is so stable that existing wiring can be used in most retrofit applications!

Genesis Series signals

## Signaling solutions geared specifically to healthcare settings

**Genesis Series** notification appliances represent the rebirth of fire alarm signals with looks, features, and benefits ideal for healthcare facilities. Wall strobes, horns, and chimes about the size of a deck of playing cards offer a discreet alternative to bulky devices, while speakers and ceiling models with clean modern lines blend inconspicuously with their surroundings.

Genesis brings on-demand signaling to every application with an unparalleled range of field-configurable options including high/low dB output settings, wattage tap selections, and selectable candela output and flash rate.

These options deliver the kind of signaling control hospitals need. In fact, Genesis strobes feature the industry's first and only private mode temporal flash. Developed specifically for healthcare settings, this feature reduces power demands and cuts equipment costs.

## Why is GE Security the right choice for your healthcare facility?

From pioneering work in multisensor technology, to award-winning design breakthroughs, GE Security has established itself as the leader in cutting-edge systems technology. Today our name is synonymous with innovation and quality, and we are widely regarded as the company that has achieved some of the most significant and forward-looking advances in our field.

The true beneficiaries of these advances, however, are the people that make the biggest investment in our products and systems – decisionmakers like you who trust GE to deliver the most effective protection for their people, property, and assets.

One of the most important ways we meet our goals is by focusing on life safety markets that require special attention. Healthcare is one of those areas. Every new product, every enhancement, and every development undergoes intense scrutiny from a healthcare application perspective. We consult with industry experts in the field as well as our own in-house healthcare specialists to design and engineer products specifically geared to your facility. That's why, when it comes to choosing the best life safety systems and equipment, hospitals around the globe go with the leader in life safety and security technology: GE Security.
