

AURA

by CORNELL

A new dimension in emergency call systems

SENIOR HOUSING • MEDICAL • LIFE SAFETY • FIRE

Get the AURA advantage.

You and your staff can't be everywhere, but AURA can. Introducing AURA by Cornell — the software system that monitors all "alert" devices, equipment and systems, then alerts the key personnel you designate, wherever they are located and by whatever means they can be reached.

Think of AURA as a multitude of eyes and ears on the job 24/7, searching for emergencies and any event in need of prompt attention. AURA can survey places difficult for staff to monitor. When AURA detects a problem, it immediately and simultaneously notifies the people you specify, via voice or text broadcast notification.

MONITORS. Uniquely integrates all wired and wireless devices.

AURA provides comprehensive, 24/7 monitoring of surveillance cameras, fixed and mobile panic buttons, doors and windows, systems (pumps, compressors, panels, etc.) and temperature, smoke, fire, motion and temperature sensors. It easily and seamlessly integrates AURA alert devices with systems already in place. No other system makes broad scale monitoring easier.

ALERTS. Superior "broadcast notification" reaches everyone.

AURA lets you customize alerts to anyone — staff, emergency workers, relatives, physicians, management, — by the media they can most easily be reached, such as cell phones, email, computer networks, pagers, two-way radios, fax, or intercom. The result is reliable, anytime, anywhere broadcast notification. AURA also includes acknowledgement capabilities to alert the originator that the message has been received.

REPORTS. Automatically generates a permanent record.

AURA stores all monitoring and alert activity in a historical reporting system to aid with accountability, staff management and recordkeeping.

AURA does all of this as part of its extremely affordable basic system. Make the comparison and get the AURA advantage — advanced monitoring and alert notification at a fraction of what other systems cost.

How AURA works.

Whatever investments you may have already made in call alert systems is protected with AURA. That's because AURA links its own devices with many existing systems to affordably provide a fully connected monitoring and alert system customized to your needs. Simple to complex operations, hardwired or wireless, older equipment or brand new devices – AURA integrates it all for an improved, seamless operation.

Easy to program and use.

AURA simplifies your life with its single, comprehensive system that's easy to program and use. The system is configured to your most specific applications. Operation is intuitive with no special instruction or training required.

Unsurpassed reliability.

AURA routinely conducts self-diagnostic checks to assure consistent, dependable system function. You can count on AURA for the performance you demand and the peace of mind you deserve.

AURA is the only wireless call system that offers Broadcast Notification. Send out a customized alert and receive a signal back that acknowledges the alert has been received.

AURA at Work

As the Executive Director of a large senior care community, I have to know that we are providing our residents with the best care and security available. They trust us with their lives so I need to trust an emergency call system that will keep our facilities safe – that system is AURA. AURA is fully integrated with our existing system to give us complete coverage 24/7. *And that's good, because there's never a dull moment around here.*

On a recent Saturday afternoon, Mrs. Murphy, a long time resident, was having chest pains so she pressed her pendant for help. An alert notification went out to our on-site care team and they responded. At the same time, a little mishap in the staff kitchen activated our fire panel, AURA sent a voice broadcast alert to my Facility Director's cell phone and to my home phone. With the acknowledgement feature, we could let our onsite staff know that we received the alert. AURA is a wireless system with unlimited capabilities. *It's easy to use, it's easy to customize and it provides checks and balances.* It really makes my job a lot less stressful knowing that all angles are covered and everyone is protected.

CORNELL – The Care Connection

Cornell has been in the alerting and software business for over 30 years. We are recognized nationwide for our high quality, advanced and reliable equipment and systems, and our extremely competitive pricing. Our professionals invest in the latest technologies to bring our customers the best products possible. Our entire staff is customer-focused, delivering outstanding service, attention and response. We are proud to have some of the nation's leading companies, non-profit organizations and healthcare providers among our long-standing customers.

The Cornell Promise

- The Assurance that what you buy will be right for your specific needs.
- The Security of time-proven manufacturing quality...and performance so dependable, it's covered by the industry's strongest guarantee.
- The Knowledge that you've made a financially sound investment.

Put AURA to work with these other Cornell monitoring products.

Communicator RN

No other micro-processor driven audio/visual nurse call system offers as many care-enhancing features, the Communicator RN is extremely user friendly with advanced touchscreen technology.

4000 Series

This visual nurse call system is widely used in the healthcare industry because of its ability to adapt with the individual needs of facilities and its long-standing reliability.

1000 Series

The Cornell door monitoring system lets you configure the right system to fit your needs. It's the system of choice wherever reliable door monitoring is top priority.
