Need Simplicity?

The Answer is in Telligence!

GE is famous for innovation, but not just any innovation. Beginning with Thomas Edison's legendary invention of the light bulb, continuing with the development of the X-Ray tube, and up through today and the latest in CT scanning, medical imaging, and information technology, GE innovation offers solutions to problems.

Sometimes innovation can be achieved through network simplicity. Introducing **Telligence**™, GE Security's groundbreaking healthcare communication platform. **Telligence** combines the latest in Voice-over-IP and Powered Ethernet infrastructure (CAT5/5e/6) with a robust SQL database and flexible software clients to deliver a revolutionary nurse call and messaging solution that's built to maximize your existing network infrastructure – not impose on it. The solution is simplicity!

Looking for a CAT5 network cable plan from your nurse call system?

Telligence uses standard CAT5 cable, RJ connectors, and common networking topology to conform to your other networks, simplifying system installation, management, and support.

Are your network communication rooms crowded?

Telligence combines nurse call signaling, audio switching, and integrated power supplies into compact rack-mounted PowerSwitch™ and Station Gateway modules, helping you reclaim valuable space in these crowded equipment rooms.

Do you look for systems that provide long-term expansion?

Using the latest in Voice-over-IP, Powered Ethernet, and SQL database system components, **Telligence** is designed with the future in mind and will grow and evolve as your needs change.

Does your current system deliver the information that you and your caregivers need?

Telligence's software suite lets staff log on at any client workstation to access their personalized set of password-protected applications.

Innovative clients:

- *PC Assignments* provides easy assignment of staff, wireless devices, and patient beds so patient calls are automatically delivered to the right caregivers
- *MapView™*, a convenient floorplan view of **Telligence** system activity
- *NetBoard™*, an electronic whiteboard that displays real-time staff and patient information

Intuitive browser screens:

- *PC Reporting* measures response times to patient calls and other system activity, and can even schedule reports for automatic email delivery
- *PC Messaging* provides convenient text messaging to mobile devices like pagers and wireless telephones

System Connectivity:

- **Telligence's Mobility Suite** delivers all-in-one wireless system connectivity plus PC Assignments and PC Messaging
- *ADT Bridge* allows HL7 import of key patient information to **Telligence's** SQL database for display on suite applications
